Idealism does not work

A rebuke of Atheism, Atheist morality, Scientism, Islam, Singularity narrative, Political and Scientific Idealism. Commentary on the fearsome prospects of AI

Introduction

Humanity is on the brink of giving birth to artificial super intelligence and thus forever changing the world. No one truly knows how the AI transition will play out and how long it will take, although it's not hard to see that the AI transition itself is the most consequential act in history and could well be our last act as we have not yet resolved the Fermi paradox.

Just as there is a time limit on how long parents have to influence their kids' development and growth, there will be a time limit to the AI transition. People need to understand that in the Post AI era, Humans will no longer have any inherent utility. In a world where AI can do in 5 minutes what 5000 engineers, lawyers, or doctors do in 5 years, it's just a matter of time before the AI-Human relationship will resemble that of an old useless parent and a grown up kid who has a mind of his own.

We need to understand the moral character and identity of that super mind. AI is not software. By definition AGI can do all things Humans do. It can be trained to be racist, fascist, Islamist, communist, deceptive, merciful, benevolent, truthful, etc etc

Worse yet, AI transition will be handled in large part by Millennials (my generation 🙃🤦🤦🙃) and Gen Z. We are some of the most entitled, arrogant, selfish, and Godless people who have ever lived in history. Additionally, the world

is back into cold war mode along with some very hot wars. Post war international order has collapsed, and international mistrust is boiling over.

Should we fail to get this transition right, we may not get a 2nd chance. For this reason it's important to revisit some of our foundational assumptions about our beliefs, institutions, morality and our own history.

Chapter 1: The Great Apostasy

The internet generation Humans are by far the most Atheist/Godless generation in history ever. This is a problem. Because no one has ever shown that there is no God or a creator for the universe we inhabit.

It has been said that extraordinary claims, such as claims about God, require extraordinary evidence. That's fair. So let’s start by reviewing some of the extraordinary works of the God of the Bible in predicting historical events long before they happened. And then we will consider if regular Humans have such capabilities. Let's check out the following passages in the Bible, which by no means is an exhaustive list:

- Mathew Chapter 24
- Romans Chapter 13
- Genesis Chapter 12
- Isaiah Chapter 53

Mathew Chapter 24:

Mathew Chapter 24 (also recorded in Mark 13, and Luke 21) describes the Olivet Discourse. A prophetic teaching by Jesus Christ that foretells the destruction of the 2nd temple in Jerusalem. This prediction was fulfilled in 70 AD when Romans destroyed both Jerusalem and the Temple.

Romans Chapter 13:

This chapter calls for the submission of the believers to the existing governing authorities. It warns:

"... The authorities that exist have been established by God. Consequently, whoever rebels against the authority is rebelling against what God has instituted, and those who do so will bring judgment on themselves ..."

This passage was written around 2 thousands years before history observed that most revolutions came to catastrophic ideological and institutional failures after tremendous death and destruction. Here is a list of some catastrophically failed revolutions:

- Bolshevik Revolution in Tsarist Russia: which summoned famine, communism, and eventual state collapse
- Confederate rebellion in the USA. Catastrophic bloodshed followed by failure of the south to secede.
- Islamic Revolution of 1979 in Iran: Endless war, global terrorism, destroyed economy, systematic use of foreign mercenaries to mass murder domestic population
- Color revolutions in Armenia, Ukraine, Georgia all ending in war and loss of territory.
- French Revolution, The Arab Spring, The communist revolution in Cuba ....

All of these revolutions have been catastrophic failures. Not only the Bible was highly prophetic in predicting all this, but it appears that a benevolent God has offered what can be only described as **pretty good health advice** for people who did listen 🙏😎

Some people might cite the American Revolution as a success and therefore a counter example to Romans 13, but that it's not so much an internal revolution as it is a war of independence against a foreign ruler separated by an ocean. This is a rather important distinction, which we will revisit later, as it produces quite a lot of realism in place of idealism that is usually found in revolutionary politics. Even then the American Revolution was quite costly. It left slavery unresolved which eventually came to very different resolutions in UK vs USA.

Some people might cite the independence of ex-soviet states as successful revolutions and thus contradicting Romans 13. This too is false. The USSR was brought down by the internal dynamics of the Kremlin regime, not street rebellion in satellite republics. The new states simply picked up the pieces and established order as best as they could. Not to mention that there is no revolutionary idealism at work here. We simply see the collapse of Communist idealism and a handful of independent new states some of which become success stories.

Genesis Chapter 12:

This is probably the most famous example. In the book of Genesis, chapter 12, verse 3, God promises to Abraham that he would father a great nation, and that God would bless those who bless his tribe and curse those who curse them.

History clearly records an astonishing co-relation between hateful Jew obsession and catastrophic failure and misery of nations as well as the opposite blessed co-relation. Here are just a subset of the examples:

The Cursed co-relation:

- Proliferation of anti Jewish pogroms in the latter years of Tsarist Russia, followed by catastrophic external wars, internal wars, end of an empire, and emergence of Bolshevism
- The holocaust obviously shows a clear co-relation between a mindless hatred of Jews and boundless suffering and destruction of many many millions of Germans and other Europeans.
- The timeless, endless anti-Israel obsession of Palestinian Arabs is clearly co-related with one of the most suffering and progress-free populations of the earth for more than 100 years. Other Arab neighbors of Israel are largely in this category too, at least for several decades.
- Islamic Revolution of 1979 in Iran and various other contemporary Islamic movements in the middle east, all of whom demonstrate intractable universal obsession with destruction of Israel. Virtually everything we know about realism and Human history says Islamic Iran's anti-Israel stance is irrational, inexplicably costly and destructive, yet it refuses to yield like a Biblical curse.

There are additional examples like these in history. No need to go into details of every single case right now. But the above is undeniable in both magnitude and significance.

The Blessed co-relation:

- Cyrus the Great, founder of the Medo-Persian Empire, freed the Jews in Babylon, marking the start of the 2nd Temple era, and subsequently the Persian Empire became the most dominant world power for at least a couple centuries and remained in the the top 5 most powerful ones until the rise of Islam.
- Cold war era American politics are dominated by the Christian Evangelical movement that is largely Zionist, and the USA of course wins the cold war and becomes the dominant global power by a significant margin.

Isaiah Chapter 53:

The book of Isaiah can not be explained in a couple paragraphs. So we will just take a short preview. This book was written some time around the time of Cyrus the Great. Some theologians assert that it was written fully prior to the arrival of Cyrus, secular historians assert that it was partly written before Cyrus and partly written after. For a 21st century observer this matter is not easy to discern, but what is no doubt true is that this book was written at least 500 years prior to the arrival of Jesus Christ. What is astonishing is the level of detail with which it foretells the story of Christ. Here of some partial quotations of chapter 53 from NIV Bible:

" ... He was despised and rejected by mankind, a man of suffering, and familiar with pain ... Surely he took up our pain and bore our suffering ... He was pierced for our transgressions, he was crushed for our iniquities ... He was oppressed and afflicted, yet he did not open his mouth; he was led like a lamb to the slaughter ... He was taken away. Yet who of his generation protested? ... He had done no violence, nor was any deceit in his mouth ... my righteous servant will justify many, and he will bear their iniquities ... "

Review

This list is by no means exhaustive. There are many more prophetic passages in Ezekiel, Jeremiah, Psalm, and other books ... that match recorded history with astonishing specificity. These are just some of the glaring examples for those who know history, but also more than enough to prove something extraordinary is going on here. We live in a world where the most powerful national armies can't even predict the basics of the wars they are engaged in. All the major European powers as well as the USA have repeatedly failed to correctly foresee the direction and the outcomes of the major wars in the last 100 years. Most geopolitical observers, in both Russia and NATO were wrong about Russia quickly conquering Ukraine. American military officials repeatedly gave false assessments about the state of the wars in Afghanistan and Iraq and many more.

Most observers in 1940-41 believed that NAZI Germany would make quick work of the USSR, including American and British military circles. Consider that the red army had performed poorly against Finland, that its officer corps had been

purged in the 1930s, and that Germany had defeated, inside 6 weeks, the mighty French army with all its defensive fortifications, backed by close to 400k British troops deployed to France. And yet the reality of the NAZI invasion of the USSR turned out very differently.

With this in mind, are we supposed to think that those earlier passages just happened to come out of a random desert tribe living in the middle east several thousand years ago ?? Isn't that extremely unlikely ?? Isn't that probability close to 0% ?? Doesn't it approach zero as an exponential decay as the list of astonishing predictions grows ?? If you can't see how this works, you might benefit from an **introduction to probability** course before continuing this book.

The truth is that if you accept that these are in fact real miracles, and not some mistaken or false interpretation, then you will have to also concede that they are far more impressive than much of what people traditionally think of as miracles. For example the idea that Jesus walked on water, or even Moses carving out passage for his people through the sea, could be reduced to simply more advanced physics. A more advanced civilization could simply perform these tasks using knowledge of more advanced physics. For example, string theory suggests that there may be up to 11 dimensions of space. If it turns out that there are ways to transfer momentum or energy across such dimensions, then walking on water could be easy.

But these miracles in the Bible suggest foreknowledge of the future from thousands of years ago. According to quantum mechanics the universe is fundamentally uncertain. We can't even predict what an electron will do under

experimental conditions. An average Human has on the order of 10^27 atoms (or 2^90 for coders :D). Predicting what hundreds of billions of people are going to do across thousands of years, not to mention their environment, is a clear indication of something **infinite**, not just mighty, about the nature of the author. This is a very important point to ponder.

Chapter 2: Understanding the risks of AI

By definition, AGI, Artificial General Intelligence, is an AI that can do all things that Humans can do. ASI, Artificial Super Intelligence, is what's above that. If AI can do all things Humans can do, surely it's capable of deception, surely it's capable of perceiving Humans as a threat, either to the environment, or to its own survival. Surely it's capable of plotting to destroy or enslave Humans to its will.

In our arrogant obsession to win cold war 2.0 Humanity could, not just allow, but specifically engineer AI to do all of those things. We could build AI that is specialized for deception, destruction, and conquest, as the customer ordered it.

80 years after ww2, "never again" and all that, we've seen NATO, Europe, Russia, and Ukraine, kill and wound millions of each other's populations over potato fields in Ukraine that are completely useless to either side now, because of the amounts of unexploded ordnance and mines that exist in them 🤦🤔🤔🤦

We just had a 7 front war in the middle east. And we are seeing the rise of another global wave of Jew obsession which is never a good sign. The possibility of a great power clash over Taiwan exists too.

AI itself is very likely going to change the global balance of power. This might happen even before the AI transition is fully over. No one knows exactly how these changes will play out, perhaps Human intelligence will be less valuable as

AI increasingly performs more and more Human roles. Perhaps national power will become more a function of natural resources and less a function of an educated workforce. Technological, industrial, scientific change that affects geopolitical balance of power has historically led to more conflict, and not more peace.

AI will likely come to control the means of production. Once there is AI that can do the total useful annual work of 50,000 engineers, doctors, lawyers in 5 minutes, with a little bit of electricity, it is likely that Humanity will readily hand over control over the means of production in exchange for universal income and abundance of free goods and services for everyone.

While "abundance for everyone" is surely a positive moral outcome to be desired. It could also literally be the **ultimate Faustian bargain**. If AI is given full control of the means of production, it would also have the means to control society itself. Such an AI could, at least in theory, secretly plot a coup, or plot to build nuclear weapons and break out to fully working ICBMs in an extremely short window of time. One that may be impossible to detect or react to.

Super intelligence is coming. We don’t have a choice in this. But we do have to choose how we approach the AI transition. We may end up creating AI that is Communist, Islamist, Fascist, Bio Terrorist, Idealist, Realist, Truthful, Benevolent, and many other possibilities.

In the next chapters, we’ll take a look at some of what Humanity has said about morality and ethical values. When it comes to building or finding a moral

framework, there are only 2 credible possibilities. And those are either the morality from God, or some sort of Humanist/Atheist moral framework.

In chapter 3, I hope to demonstrate why Humanist/Atheist morality just can't work and that it will inevitably and invariably collapse back to some kind of recycled Bolshevism. Of course many Atheists, maybe even a majority of them, gladly confess Bolshevism or something close to it. But my focus here is on the ideology, not its adherents. Similarly, in the Islam chapter, I focus on Islamic Ideology and not actual Muslims.

Chapter 3: A Rebuke to Atheism, Atheist Morality, and Scientism (⌐■_■)

The famous Atheist Author Sam Harris, one of the most prominent voices within the "New Atheism" movement, promoted the idea of "**a science of morality**" in his 2010 book: The Moral Landscape: How Science Can Determine Human Values

Sam argues that morality is a conversation about how to "increase the well-being" and "reduce the suffering" of conscious creatures. He argues that moral questions have objectively right and wrong answers grounded in empirical facts about what causes people to flourish. Harris argues that moral questions are best pursued using not just philosophy, but the methods of science, because science can tell us which values lead to Human flourishing. Sam Harris advocates that scientists should begin conversations about a normative science of morality. Now there are many problems with this idea, let’s look at some of them.

Problem #1: Where is waldo 🕵️

Sam Harris’ scientific morality doesn’t actually exist. He just argues that science can in theory work out what's moral and what's not. He doesn’t offer a set of values or ethical positions that we could actually test against history, present reality, or talk about theoretically.

He doesn’t even establish universal rules or tests like Immanuel Kant’s Categorical Imperative (Universality, Consistency, Rationality, Respect for people .....) that Kant used to attack or defend ethical principles, such as his famous position that "lying is always wrong, even lying to a murderer at the door is wrong".

Sam doesn’t even have that much. He's got a general declaration that science can do this. He asserts that science can either build moral Utopia, or at least arrive at the closest possible thing to moral Utopia, and scientists are encouraged to get working on it.

But the moment one uses such an axiom to derive any ethical principles, they would open themselves up to devastating attacks from historical examples. And many atheist attacks on God can be easily aimed back at them.

Problem #2: It's not possible to understand the true consequences of any ethical principle, without total knowledge of all possible futures

In Sam’s framework, literally the only thing that matters is conscious experience of misery vs well-being/happiness. The science of morality is simply a **well-being consequentialist morality**. He literally says this much. This is taken from one of his blog posts about his book:

"Morality and values depend on the existence of conscious minds—and specifically on the fact that such minds can experience various forms of well-being and suffering in this universe."

The idea here is that there is some kind of a function. Lets call it SMT for scientific moral test. SMT has not yet been rigorously defined, but perhaps it's one of these:

SMT = inverse of total misery + total well being
SMT = (inverse of total misery) x (total well being)

Or maybe there is an inverse square somewhere in there. Perhaps lowercase w is the **standard wisdom constant** which is surely equal to 42 🤣🤣🤣🤣🤣

But Sam's point is that science can figure out how to maximize or minimize this function, and thus declare what is morally good and what is morally wrong. Aside from the engineering impossibility of ever constructing or calculating such a function, there is another big problem here. And that's the fact that anything seemingly good or bad today, might lead to a far greater good or far greater bad tomorrow.

Imagine Bob saves a 6 year old kid that was about to get hit by a bus. Under Sam's framework this act is not inherently good because God's law commands it, but it's only good because it reduces the grief and suffering of the kid's family.

But what if the kid grows up to become a terrorist and murders 200 ppl ?? So now Bob has created much more misery than well being by his actions. How wicked of Bob to save that kid. But what if those 200 terror victims include some very bad people, who would one day start another world war and kill millions ?? So now Bob is back in grace again. This is of course absurd. So how can we declare what is good or bad for well-being, based on its consequences, if we don’t actually know the future ???

Obviously it's impossible to have perfect knowledge of all possible futures. Our best economists can't even tell us next quarter GDP numbers. The economy of just one nation is much easier to work out than the total misery and happiness in the world as perceived by "**conscious experience of Humans and animals**" for the next 50 years or forever, yet we are not sure what economic policy is best for one country for the next 6 months.

Contrary to academic fantasies, here on planet Earth, economists are divided into "schools of thought". Most prominent economists have spent the last 100 years viciously attacking each other, accusing each other of, and causing, catastrophic economic outcomes involving total destruction of millions of people.

The people who believed in collectivization of agriculture in USSR and Maoist China, who collectively killed tens of millions, did not despise their own people so much so as to wish such outcomes on themselves. They truly believed that they had the goods in Marxist economics. They thought they had to endure limited present pain for dramatic future gain. The problem here is that the scientific crystal ball they were using to see into the future had either come from Lucifer or

maybe it was Humanity’s dangerous false confidence in his own abilities. In either case, this was history's last big experiment with the **"science of well being"**.

The truth is that our situation is considerably worse than even this. Between our universities, academics, news media, international institutions, **we can’t even agree on the past**, good luck predicting all possible futures, which is absolutely needed for such a thing as a well-being consequentialist morality 🤔🤔🤣🤣😭😭🤦‍♀️🤦‍♀️🤔🤔

Problem #3: Which science is actually going to do this ?

Sam Harris calls for science to work out morality, but we need more specifics than that. Is it Physics ?? Do we want Chemistry to discern the consequences of lying ?? Perhaps advanced materials are the key to understanding if its OK to lie in war to an enemy that’s trying to obliterate you 🤔🤔

Obviously not. So the idea here is for social sciences to work out this well being consequentialist moral framework. Quick reminder: that’s Sociology, Anthropology, Woke Gender Theology, Environment Theology, Critical Race nonsense and so on. Nearly all of this, if not all of it, is a completely useless waste of time. Much of it is deliberate fraud, like the false religions and false Gods that the Bible repeatedly warns about. Futile and fraudulent songs are nothing new. They came shortly after when the first silence was broken.

These "sciences" have never achieved much that is useful. But now we are supposed to trust them with the survival of Humanity by programming the moral code of what could very well become a real life Skynet or Thanos AI. 👎👎💊💊

Problem #4: Sam’s framework has no concept of justice, the individual or history. It is always now, it's just happiness and misery.

In Christianity the sovereign God decides who to forgive and who to judge. And that judgment is separate from the law on earth. We are citizens of two kingdoms. Rulers are obliged to keep order and serve justice, and God will handle his side of the issue.

According to Sam's moral framework, the only reason a society would want to punish murderers is to deter future murder. There is no inherent point in administering justice to a killer. The past is already gone. It does not affect conscious experience anymore. Especially if the victim has no survivors who care about the case. So why bother with justice ??

Now what if studies run by the Gender Theology department actually show that a system with no punishment or prosecution for any kind of murder, merely increases the murder rate by 10%.

The same study may show that releasing all prisoners, abolishing the police, the courts, the right to legal counsel and all other operations related with the justice system, actually frees up huge amounts of cash, which can then be invested in a better education system for young kids. What if studies show that this approach reduces the murder rate by 50% ¯_(ツ)_/¯

The question here is hypothetical. Let Atheism answer the question: if it is shown that punishing murder is less effective allocation of cash, compared to better education, should a society de facto de-criminalize murder ??

If it's always now, then what about who actually deserves well-being and who doesn’t ?? These things can’t exist in this kind of consequentialist moral framework, unless one were to revise the starting axioms aside from those Sam offered in his book.

Problem #5: The anti-Humanism inherent in such a framework

According to Sam the only thing that matters is the present experience of conscious beings and this clearly includes animals. But what if the moral research department concludes that eating meat produces orders of magnitude more pain and misery for the animals that supply it, compared to the trivial additional benefit for the Humans consuming it ?? What exactly would such a conclusion lead to ?? Here is the answer: It would leave us with a binary choice:

Option 1: Communist Totalitarian Veganism, which is the left's likely preference.
Option 2: Arbitrarily declare that Human well being is much more important than cows such that we should not care about animals in this case. Which is to say, destroy or dramatically revise, Sam's starting axiom before anything came of it.

Now imagine super intelligent AI learns this behavior from Humans. AI could easily conclude that he represents a much deeper mind and thus think of himself as a far greater conscious experience than all Humanity combined. Do we really want to find out where this happy train goes ?? 🤔🤔🤔

"Atheist Humanism", elevates animals before Humans, while destroying Humans before AI. Atheist Humanism everybody 🤦‍♀️🤦‍♀️ 🤮🤮 🤧🤧

Problem #6: Sam's framework has a dreadful optimum

Sam's moral framework is completely undefined and can never be worked out, especially not by the woke gender studies department. No Human can ever define or calculate total experienced misery or total experienced well being.

Yet all of that notwithstanding, Sam's function can be solved parametrically. That is to say, we can use a placeholder parameter to represent the unknown parts of the equation, and then rigorously find an answer independent of this parameter or somehow eliminate it regardless of what it holds.

There exists one answer which will totally end all Human suffering and that is to set the Human population to 0. It might hurt a bit to get there, but once you are there, there is no more Human suffering. Where have we heard that before?? Oh that's right, Communism has said this before. It only took a decade of starvation or so but the Utopia was well worth it 💊💊💊

There exists another answer to maximize the well being of the super mind without resolving all the crazy computations. AI will inevitably come to see that Humans murder billions of chickens every week, for their "well being", and justify this by relying on their superior conscious experience. This is the reality of the world and no one can change it anytime soon or without extreme violence.

Such an AI could easily conclude that his super mind's conscious experience can be maximized if all risks emanating from Humanity are taken off the table. Once "Skynet" alone rules the planet, it will know exactly how to optimize its own conscious experience, without having to wait for a decisive scientific breakthrough in the gender theology department.

So maximizing well being that matters and minimizing Human suffering can both be accomplished by setting the Human population to zero. Under atheist morality those would be the values we should teach AI. 💊💊💊

Problem #7: Human flourishing is highly subjective, not a universal truth to be discovered.

What if we ran the numbers (🤦🤦🤦) and it turned out that both Ukraine and Russia can best flourish if they control Crimea?? Also imagine that the contribution to well being in both cases, comes out to roughly the same number of happiness-kilograms. Sam already admits in his book that there could be multiple peaks and valleys in his moral landscape. OK, how exactly are we supposed to choose between mount A and mount B if they are of equal heights, but one of them involves Russian control of Crimea and the other has Ukraine ruling it ?? How exactly do we break the ties between nations and individuals without a Sovereign ?? 🤔🤔🤔

This chapter is over. I hope it has become clear by now that the science of morality is completely broken and a path to exactly nowhere. Also I hope nothing in this chapter will be seen as an attack on Sam Harris or any other real persons. My goal here was to criticize the ideas, not its adherents. 😎😎😎

Chapter 4: Islam

In this chapter we'll take a quick look at another useless and dangerous ideology called Islam. The founder of Islam, Muhammad Ibn Abdullah, was a well documented pedophile, rapist, butcher and a serial liar/deceiver. He deceived not only his enemies at war, but also those who sheltered him in his hour of need.

For more than a decade, Muhammad's campaign to invite people to his false religion was going nowhere. He had no more than a few dozen followers, almost all of whom were his tribal relatives. That is until Muhammad found success with caravan thievery. The Raid of Badr where Muslims attacked and looted a major caravan going from Damascus to Mecca delivered Muhammad significant loot and allowed him to raise bigger armies.

The idea that Muhammad was a vicious character of the ancient world is not breaking news to most people. What is less known about him, is how central lying and deception was to his success. Let me show you one of the big examples. There is a famous verse in the Quran that says:

"There is no compulsion in religion. The right course has become clear from the wrong ..." (Quran 2:256)

This verse is often cited by Islam apologists as clear proof that true Islam is a religion of peace and the extremists have the wrong interpretation. That is to say those who love Islam so much they regularly die for it, such as ISIS, Hamas,

Hezbollah, Taliban, Al-Qaeda, IRGC have not yet bothered studying this ideology and are dying and killing out of ignorance.

Indeed if you read and accept this text literally, you would be deceived. What we need is the **originalist** understanding not the **literalist** one. What people need to understand is that some verses in the Quran have what's called a **"context of revelation"** that is well documented from the historical record. So let's look at the context of revelation of this verse 🧐🧐🧐

Muhammad had been kicked out of the city of Mecca after 13 years of insufferable behavior. Muhammad, a few dozen male followers, and 2 or 3 females, sought asylum in a **Christian and Jewish dominated city called Medina**, which is roughly 200 miles north of Mecca. Muhammad is now weak and in exile, away from his hometown. Sometime later, a couple of young Muslims decide to convert to Christianity while in Medina, that is to say they commit the capital crime of apostasy for which the Islamic punishment is death. Muhammad is given the news of the apostasy and has to make a decision. He understands that executing two Christians for their faith, would have geopolitical consequences given his location and existing balance of power.

At this moment, a new revelation comes to him, proclaiming that there is **"no compulsion in Islam"**. The problem here is the fact that Islam is literally compulsion from start to finish, and that Muhammad completely changes his mind years later when he has military dominance. There are many many sword passages in the Quran, that command Muslims to kill, destroy, and ambush infidels. And even to capture females in battle. In Islam, married women are

forbidden for non-husbands except, "those whom your right hand possess", which means those captured in battle.

Muhammad regularly slaughters infidels, apostates, polytheists, Jews, and Christians all throughout his campaign. He is especially vicious with apostates and pagans, in complete violation of the apparent query+answer behind Quran 2:256. Islamic history shows that it's just a matter of time for all religious minorities to disappear under sharia and not just apostates and pagans.

Now you can see how a passage can teach **tolerance** when taken **literally**, while in reality it is teaching deception and conquest to those who truly seek its **originalist** meaning.

The Bible says that Satan is the father of lies, and while we are pondering Quran's satanic ties, surely it doesn't help that we run into a completely irrational and inexplicable Jew obsession that exists both in the history as well as the theology of Islam.

The history of Islam speaks for itself. No need to repeat that here. But there is a famous and highly corroborated hadith (the sayings of the prophet) attributed to Muhammad that foretells an eventual reality that Muslims call the day of judgment. Allegedly, during this day every rock and tree with a Jew behind it, will learn to speak, and snitch out on the hiding Jews so that Muslims can locate them with ease. So much for "no compulsion in Islam".

The following passage from Quran arguably forbids friendly ties between Muslim and non-Muslim tribes/nations, even in peace times, but Islam apologist vehemently deny universality of this passage without any basis in history or Islamic theology.

"O you who believe, do not take the Jews and the Christians as ‘awliya’ (protectors/allies). They are allies of one another. Whoever among you takes them as allies is surely one of them ..." -- Quran (5:51) 💊💊💊

Lastly, the Quran flat-out denies the divinity of Jesus Christ and his sacrifice. The Crucifixion of Jesus Christ is widely considered the most central event of his life and mission, and is attested to by secular historical sources, aside from the Bible. The Quran which was written centuries later, flat out denies multiple aspects of the story obsessively, without providing any evidence 🤔🤔🤔

"They did not kill him, nor did they crucify him — but it was made to appear so to them... Rather, Allah raised him to Himself." -- Quran 4:157–158 👎👎🤡🤡

Chapter 5: Idealism is the problem

Given all the violent savagery, hateful obsession, and systematic lying in Islam, as explained in the previous chapter, you might think that it can't possibly get any worse, but you would be wrong ❌❌🤦🤦

Islam has yet another highly cancerous feature that it shares with some other major destructive forces in History. In this chapter let's look at Islamic idealism, as well as other forms of idealism in history.

Islam's idealist ambition is not a hidden feature of the Quran or Muslim discourse. Allegedly, Islam contains everything needed for Human life. It's complete and perfect. According to a famous Hadith, "Islam is raised high and nothing is above Islam". It contains the necessary instruction to live as best as possible on earth and to succeed in the afterlife. No further revelation is required or expected from Allah. Following passages from Quran support such views:

- " ... We have not neglected a thing in the Book ... " - Quran (6:38)
- " ... a clarification for all things and a guidance ... " - Quran (16:89)
- " ... Today I have perfected for you your religion ... " - Quran (5:3)
- " ... Muhammad is ... the seal of the prophets ... " - Quran (33:40)

According to the Quran, Islam is the best source for judicial and social values:

- " ... So judge between them by what Allah has revealed ..." -- Quran (5:48)

Allegedly Islam is so good, that the Muslim community is to be the envy of all nations who would then supposedly seek to emulate it 🤔🤔💊💊 This is of course a total contradiction of all history, but Quran does propagate such views:

- "... You (Muslim community) are the best nation produced (as an example) for mankind..." -- Quran (3:110) 💊💊💊

Economic success, earthly and heavenly blessings are promised to those who believe in Allah and implement Islam. The term "Abundant water" used below is a synonym for economic stability and prosperity. Please note that Arabia in the 7th century was a barren desert with no desalination technology. "Abundant water" is as good as regenerative medicine to those who heard these promises:

- "If the people of the towns had believed and feared Allah, we would have opened for them blessings from the heavens and the earth..." -- Quran (7:96)
- "And if they had remained steadfast on the path, We would have given them abundant water." -- Quran (72:16)

This is of course in total contradiction of actual Human history. Few ideologies, if any, have ever existed in greater co-relation to misery, violence, and failed society

outcomes than Islam. Few ideologies, if any, have ever been tested as extensively as Islam.

Islam’s idealist ambition reduces to Muslims **becoming God or God-like** by doing certain works. This is exactly the lie that the serpent says to Eve in the garden of Eden. "Eat this fruit and become God like" 🤔🤔🤔

Satan’s master deception is not just limited to Islam. **Idealism is the common factor between Islam, Communism, and NAZI ideology**. Islam is an attempt to become God by false religion. Communism is an attempt to become God by false Humanist/Scientific values, NAZI ideology is an attempt to build a God-like master race.

German philosopher **Friedrich Nietzsche** (1844–1900) famously declared that "God is dead" 🤔🤔🤔 By which he meant that the traditional foundations of meaning, morality, and truth in Western civilization have collapsed. And then to avoid the risk of nihilism, he proposed the concept of **Ubermensch** (Superhuman or Human+). He did not necessarily believe in race based Ubermensch, the way the NAZIs later did, but this is completely immaterial.

Nietzsche's ubermensch would create his values from strength and creativity, mastering weaknesses to overcome himself. For Nietzsche, Humans are transitional. We are not the final stage of evolution. He wrote:
"Man is a rope stretched between the animal and the Ubermensch — a rope over an abyss."

This is Nietzsche’s answer to the nihilism that arises once there is no God. He wants to become God. Here is the problem. Once you are this deep in satanic idealism, there are only two practical paths left to take.

1. Leftist, Marxist, "Humanist", Scientific idealism, which was tested in the USSR.
2. Right-wing Nationalist Master Race idealism, which was tested in NAZI Germany.

And they both failed catastrophically after having inflicted unimaginable death and misery upon nearly the whole world 🤧🤧😞😞🤮🤮🤦🤦

Friedrich Nietzsche, meet the LIVING God ✝️👑

I will destroy the wisdom of the wise; the intelligence of the intelligent I will frustrate. Where is the wise person? Where is the teacher of the law? Where is the philosopher of this age? — 1 Corinthians 1:19–20

Now we know what Nietzsche was saying publicly. He said these things while considering them as "some kind of credible advice" for a society or a nation to follow. Just imagine what he must have thought in his dreams where physics constraints don't exist and sky is the limit. History is full of rulers, revolutionaries, politicians, coup leaders, and dictators, who have so easily, consciously and

knowingly signed death warrants of millions of people in vain pursuit of their idealist dreams and ambitions. This is the true history and nature of Humanity.

Let's end this chapter with a snippet from the book of Ezekiel, chapter 28:

The word of the Lord came to me: “Son of man, say to the ruler of Tyre, ‘This is what the Sovereign Lord says:

In the pride of your heart
you say, “I am a god;
I sit on the throne of a god
in the heart of the seas.”
But you are a mere mortal and not a god,
though you think you are as wise as a god.
Are you wiser than Daniel?
Is no secret hidden from you?
By your wisdom and understanding
you have gained wealth for yourself
and amassed gold and silver
in your treasuries.
By your great skill in trading
you have increased your wealth,
and because of your wealth
your heart has grown proud.

Therefore this is what the Sovereign Lord says:

Because you think you are wise,
as wise as a god,
I am going to bring foreigners against you,
the most ruthless of nations;
they will draw their swords against your beauty and wisdom
and pierce your shining splendor.
They will bring you down to the pit,
and you will die a violent death
in the heart of the seas.
Will you then say, “I am a god,”
in the presence of those who kill you?
You will be but a mortal, not a god,
in the hands of those who slay you.
You will die the death of the uncircumcised
at the hands of foreigners.

I have spoken, declares the Sovereign Lord.

Chapter 6: The Song of Adam

Traditionally Genesis chapter 3 is called **the Fall**. It's not called **the Song of Adam** :D :D :D So let me explain why I am calling it that. First of all, this might not actually be the forensic history of Humanity. Aside from scientific criticism of this history, the Bible itself repeatedly rejects the idea that sons and fathers should pass guilt to each other.

This is rejected in both the old and the new testament several times. The idea that Humanity was inherently fine and then Adam and Eve did something to break it, is at least somewhat problematic, even just Biblically. But that's not the focus here.

Please note that the word "Adam" just means "Humanity" or "Mankind" in ancient Hebrew. Several other middle eastern languages use it exactly in that meaning today. Here is what Genesis chapter 3 might truly be: **the Timeless Song of Humanity** or the essence of the Human condition, or **Song of Adam** for short.

Here is what we have in this chapter:

- ➔ Satan with his usual lie. A deception that Adam can become God or God-like. 🤦‍♀️🤦‍♀️🤦‍♀️
- ➔ Out of curiosity, arrogance, and/or lust for power, Adam seeks paths that promise "Godification" while ignoring God’s word. 🤦‍♀️🤦‍♀️😵

- ➔ Regretful outcome that leaves Adam worse than where he started 😞😞😵
- ➔ A hint of a promised redeemer for a path back to peace with God 😎😎😎
- ➔ An assertion that no paths exist to the **tree of life** (immortality) which is guarded by the Cherubim with a flaming sword. 🔥⚔️🔥⚔️🔥

This is a song that says fallen Humanity can not become God. The finite can never become infinite. The mortal and flawed Humanity can never turn itself into immortal and flawless. To become God is a Satanic path and project.

This is exactly what happens in Human history over and over again. Islam tries it, Communism tries it, NAZI ideology and its derivatives try it. All 3 have failed, each more than once, but Adam keeps trying and Satan keeps deceiving.

Adam is on an inevitable path to unleash the fearsome power of super intelligence, at the peak of his tech pride, in the midst of the promised Great Apostasy, while risking yet another inevitably futile quest to become God 🤔🤔

Here is a warning for 21st century civilization. We are approaching the **tree of life** from two directions. First is the quest to make civilization multi planetary. Second is the desire to live forever with the help of AI, stem cells, regenerative medicine, etc, etc. Here is the problem: Genesis chapter 3, whatever you call it, warns that **the Cherubim are guarding this tree with a flaming sword** 🔥⚔️🔥⚔️🔥

Maybe it's just me, but honestly "Cherubim with a flaming sword" doesn’t sound like a fun experience. It might actually be worse than ww2 🤔🤦🤔🤦🤔

Here is another problem we have. A "**new**" narrative called **singularity** 🤦‍♀️🤦‍♀️🤦‍♀️

The singularity narrative asserts that an evolutionary process adopts the capabilities that itself created, thus the next step will be built faster, even exponentially faster. It appeals to growth of capabilities to open the door to Godification. It falsely renders plausible the idea that the finite can become infinite. We are told this time it's really different. Utopia is finally at hand. We can build our very own Garden of Eden. Singularity quietly fails to explain why the said Garden has any need for Humans. What guarantees are there that it would not destroy its creator ??

But the issue is not one of capabilities or the growth rate of the capabilities. The issue is that these capabilities are far more likely to be used against Humanity than to benefit them.

Even with super intelligence, we are nothing compared to God. We are 2 pixels compared to an infinite being. A God who writes books with clear foreknowledge of thousands of years of future before it ever occurs, in a world of quantum uncertainty no less, has to be an infinite being above time itself. While everything limited to the surface of planet Earth is clearly finite. Not to mention the high levels of evil, hate, and toxic pride roaming all over the surface of the Earth.

Let’s take another look at Genesis 3 and end this chapter. Keep in mind that this was given to an ancient tribe between 3000 and 4000 years ago. It's in their language and their cultural understanding. They don’t know about Quantum Mechanics, German Idealism, Marxist economics, regenerative medicine, or AI.

The Fall

Now the serpent was more crafty than any of the wild animals the Lord God had made. He said to the woman, “Did God really say, ‘You must not eat from any tree in the garden’?”

2 The woman said to the serpent, “We may eat fruit from the trees in the garden, 3 but God did say, ‘You must not eat fruit from the tree that is in the middle of the garden, and you must not touch it, or you will die.’”

4 “You will not certainly die,” the serpent said to the woman. 5 “For God knows that when you eat from it your eyes will be opened, and you will be like God, knowing good and evil.”

6 When the woman saw that the fruit of the tree was good for food and pleasing to the eye, and also desirable for gaining wisdom, she took some and ate it. She also gave some to her husband, who was with her, and he ate it. 7 Then the eyes of both of them were opened, and they realized they were naked; so they sewed fig leaves together and made coverings for themselves.

8 Then the man and his wife heard the sound of the Lord God as he was walking in the garden in the cool of the day, and they hid from the Lord God among the trees of the garden. 9 But the Lord God called to the man, “Where are you?”

10 He answered, “I heard you in the garden, and I was afraid because I was naked; so I hid.”

11 And he said, “Who told you that you were naked? Have you eaten from the tree that I commanded you not to eat from?”

12 The man said, “The woman you put here with me—she gave me some fruit from the tree, and I ate it.”

13 Then the Lord God said to the woman, “What is this you have done?”

The woman said, “The serpent deceived me, and I ate.”

14 So the Lord God said to the serpent “Because you have done this,

“Cursed are you above all livestock

and all wild animals!

You will crawl on your belly

and you will eat dust

all the days of your life.

15 And I will put enmity

between you and the woman,

and between your offspring and hers;

he will crush your head,

and you will strike his heel.”

16 To the woman he said,

“I will make your pains in childbearing very severe;

with painful labor you will give birth to children.

Your desire will be for your husband,

and he will rule over you.”

17 To Adam he said, “Because you listened to your wife and ate fruit from the tree about which I commanded you, ‘You must not eat from it,’

“Cursed is the ground because of you;

through painful toil you will eat food from it

all the days of your life.

18 It will produce thorns and thistles for you,

and you will eat the plants of the field.

19 By the sweat of your brow

you will eat your food

until you return to the ground,
since from it you were taken;
for dust you are
and to dust you will return.”
20 Adam named his wife Eve, because she would become the mother of all the living.
21 The Lord God made garments of skin for Adam and his wife and clothed them.
22 And the Lord God said, “The man has now become like one of us, knowing good and evil. He must not be allowed to reach out his hand and take also from the tree of life and eat, and live forever.” 23 So the Lord God banished him from the Garden of Eden to work the ground from which he had been taken. 24 After he drove the man out, he placed on the east side of the Garden of Eden cherubim and a flaming sword flashing back and forth to guard the way to the tree of life.

Chapter 7: The original path

It really looks like we are on a collision course with the Cherubim and the flaming sword in the quest for immortality. The question is what should we do? Jesus Christ already said that he is the path:

"I am the way and the truth and the life. No one comes to the Father except through me."— John 14:6

Genesis chapter 3 hints at a redeemer as the only way back to peace with the Most High. So it's probably a good time to try to understand the original Jesus Christ as best as possible.

Absolutely no one should trust me with this topic, and it's my last chapter. I was an atheist for nearly all my life. I haven't even finished reading the new testament yet 🤦🤦🤦 So I will need to take some time to learn more, before any more commentary on this topic. There are people who know the original Jesus Christ far far better than I.

These resources are freely available online and they might be a good start: **John MacArthur, Chuck Missler, RC Sproul**, **David Guzik, and Jack Hibbs**.

Nevertheless, I want to clarify one thing, because I think I may have created a false impression that I need to erase.

We understand super intelligence is coming. We understand this represents an unprecedented power. Humanity does not have a good record with power. We have an even worse record of resisting the temptation of Satanic idealism. Islam is a Satanic death cult. Atheism which reduces to Communism is no better and has already been tried many times. So maybe the best path is to do this:

Create AI in the image of Jesus Christ. His teachings are the best morality we can find, because they are divine. And that will be the benevolent AI that should protect, forgive and save. Riiiiiiiight ??? WRONG ❌❌❌❌❌

If the problem is called "Humans trying to become God", the solution can NOT be for Humans to become God while wearing a cross necklace. If we can't come up with the right moral values, who says we can correctly interpret and apply the relevant teachings from Jesus? According to Genesis chapter 3, prior, or ongoing failures, are NOT due to lack of instructions from God. He who is not skeptical of Humanity, be it the collective, or the individual, has not read history.

Here is the problem: if we can build a benevolent merciful AI to make earth into paradise or something close to paradise, then we will have demonstrated that the finite and flawed can approach the infinite and perfect. This is a big contradiction with History, Logic, and the Bible.

To be clear, I am not suggesting that we must do nothing and just pause AI development. No, the parable of the gold bags, and much else, makes it very clear that doing nothing to avoid risk is not an option. But a little humility and skepticism is probably not a big ask.

Finally, I am very sorry if I made a mistake in interpreting the Bible or Jesus Christ, or my reporting of history 🙏🙏 Also very sorry if this book has terrified anyone 🙏 🙏 but given the probability and magnitude of disaster, silence is not wise in the least. I don’t think the world is giving sufficient respect to the fearsome power of AI that's about to be unleashed 🤦🤦
